

Proair RespiClick Inhaler

Medicine: Albuterol (al-BYOO-ter-ahl)

What it does

This medicine works quickly to relax your airways and make breathing easier. The medicine usually lasts 3 to 4 hours. Use it when you need fast relief.

How to use this inhaler

Important: Open the inhaler **only** if you are ready to take your dose. Each time you open and close the cover, the counter counts down by 1. You will lose the dose if you close the cover without taking the medicine.

1. Wash and dry your hands well.
2. **Don't** shake the inhaler.
3. Hold inhaler upright and open the cap all the way until you hear a click.
4. Breathe out through your mouth away from the inhaler.
5. Close your lips tightly around the mouthpiece.
6. Breathe in deeply through your mouth. Be careful not to block the air vent on the inhaler with your lips or fingers.
7. Remove the mouthpiece and hold your breath for 10 seconds or as long as comfortable.
8. Breathe out through your mouth slowly, away from the inhaler.

9. Close the inhaler cap firmly after each inhalation. This gets the inhaler ready for the next dose.
10. If you need to take another dose, be sure to close the cap and repeat steps 3 to 9.
11. Store the inhaler in a cool, dry place.

Cleaning

Keep dry at all times. Wipe the mouthpiece with a dry cloth if needed.

How to tell if the inhaler is empty

This inhaler has 200 doses. It is empty when the dose counter reads 0. When you have less than 20 doses left, the numbers will turn red to remind you to get a refill.

Throw away the inhaler 13 months after you open the foil pouch (or when dose counter reads 0, whichever comes first).

If you have questions about the use of your inhaler, please ask your pharmacist or provider.
